

Written Specification

Arrowhead Extractor

The Arrowhead extractor easily removes arrowheads. Once an arrowhead becomes embedded into a foreign substance, such as a tree simply attach the extractor plate to the arrowhead, then thread the removing screws into the extractor plate and begin tightening down against the foreign object until arrowhead is extracted.

I Everett Allen Gunnlaugsson claim the Arrowhead extractor as my sole invention and in the process of getting a full utility patent on it

Sincerely yours,

Everett Allen Gunnlaugsson
